OPEN SESAME

From simple to complex, keyless entry systems make life easier for managers and residents.

» WILEY DAVIS

[1] The iButton key is a computer chip enclosed in a stainless steel container. Each chip has its own unique ID number, which the manufacturer claims is unaffected by magnetic fields, metal detectors, water and most common chemicals. You can drop it, step on it, scratch it or wear it swimming. The iButton can be reassigned quickly and easily.

[2] The Schlage LiNK system requires the use of a Bridge unit. This connects to a home's Internet connection and establishes a Z-Wave network, allowing remote control and monitoring of locks, lights and security systems.

[3] High-tech isn't always the answer. If you want keyless entry without any electrical or computer hassle, a keyless mechanical lock is the way to go. This lock from Kaba, the Simplex 5000, is one good example. It features a key override, fully mechanical operation, and its keypad complies with the Americans with Disabilities Act requirements. The code can be changed without removing the lock from the door.

[4] Unlike standard combination keyless-entry systems, the iButton from Time Pilot Inc. uses a small keyfob in place of a traditional key. The advantage of the iButton system is tracking and access control. Each lock keeps track of which key was used and at what time. By using central-ized software control, managers can alter access rights easily and quickly.

[5] If high-technology is what you're after, then a biometric keyless-entry system might be just what you're looking for. The lock shown here is a Kwikset Smartscan lock that reads fingerprints. Just swipe a finger under the unit to unlock the door. The locks can be set to allow continuous access, temporary access, or restricted access.

[6] The Schlage LiNK system not only provides keyless entry, but it also lets users unlock doors with their cell phones or Internet-connected computers. These wireless locks connect to an online portal, allowing users to set up codes for specific days and times, receive text or e-mail notifications when certain codes are used, and track codes that have been used over the past 90 days.

Noble Innovations launched its new line of electric tankless water heaters called the Viridian. The Viridian rinses its heat chamber, made of four horizontal and downward-flowing stainless steel tubes, during each use to prevent sediment accumulation. An incoming water flow sensor instantly detects and measures the water flow and sends the information to the smart control board to set the desired water temperature.

The Zip Sponge Holder is the latest product addition to Gator Finishing Products. Designed for comfort and convenience, the Zip Sponge Holder can be used on metal, fiberglass, drywall and paint as well as wet or dry sanding. The ergonomically shaped handle is soft and squeezable for added comfort and keeps the user's hands free of contact with the sponge.
